

## The Heart of our Water Systems

The heart is the pump that keeps blood moving inside our bodies. In that same way, our Certified Water Operators are the heart of our water systems; they keep water moving inside our systems so that you have the water you need inside your homes. What does a systems operator do? Here are just a few things:

- ♥ Operates and maintains wells, pumping stations, meter stations and other infrastructure
- ♥ Takes regular water quality samples
- ♥ Currently in the process of tracking and mapping all system infrastructure with GIS
- ♥ Responds to Blue Stakes requests to mark our waterlines in construction areas
- ♥ Reads water meters monthly and are pro-active in leak detection
- ♥ Coordinates and inspects new meter installations and repairs
- ♥ Regularly attend trainings necessary to maintain operator certification

All three of our system operators, Robbie, Richard, Andrew and General Manager Carl Mackley are State Certified Water Operators and have many years of experience in the water industry. They work hard to ensure we deliver the highest quality drinking water to our customers.
